

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 7/01/01 and 6/30/02.

For comparison purposes, the following shows the Midwestern states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1999.* 67 percent of ComEd's electricity is generated by nuclear power, and another 2 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 60% less than the regional average for carbon dioxide, 76% less for nitrogen oxides, and 82% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	75%
Hydro power	1%
Natural gas-fired power	1%
Nuclear power	22%
Oil-fired power	1%
Renewables	less than 1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,647.07 lbs.
Nitrogen oxides	6.35 lbs.
Sulfur dioxide	11.87 lbs.

Make a Difference. Change a Light Bulb

ComEd is one of the sponsors of the Midwest Energy Efficiency Alliance's (MEEA) annual Change A Light, Change the World 2002 campaign. The first campaign began last year and was developed to encourage consumers to switch from incandescent to compact fluorescent (CFL) light bulbs by offering rebates on ENERGY STAR® qualified CFLs.

MEEA is a network of organizations joined together to promote energy efficiency. Created in 1999, its mission is to be a leading proponent of energy efficiency in the Midwest region. One goal is to raise consumer awareness of the benefits of energy efficiency by promoting products such as CFLs.

Standard incandescent bulbs only use approximately 10% of their energy for light, the remaining 90% ends up as heat. By using ENERGY STAR® rated CFLs in place of standard incandescent light bulbs, consumers can help reduce energy demand and the emission of air pollutants because:

- CFLs use 75% less energy than standard incandescents and offer the same high-quality light
- One CFL can last up to 10 times longer than an incandescent bulb
- A CFL can save up to \$25 in energy costs over its lifetime

The rebates apply to ENERGY STAR® rated CFLs available at participating ACE Hardware stores. After rebates, qualified CFLs will cost only 50 cents a piece. This offer is good through October 31, 2002. To find a participating ACE Hardware store, visit the MEEA Web site: www.mwalliance.org

Environmental Disclosure Information

Twelve Months Ending June 30, 2002

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

* Source – Electric Power Annual, Vol. I and II, October 2000, Energy Information Administration, Office of Coal, Nuclear and Alternate Fuels, USDOE

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2002	Percentage of Total
Biomass power	0%
Coal-fired power	29%
Hydro power	0%
Natural gas-fired power	2%
Nuclear power	67%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	2%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2002

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN† Sources for the 12 months ending June 30, 2002	
Carbon dioxide	662.42 lbs.
Nitrogen oxides	1.27 lbs.
Sulfur dioxide	1.42 lbs.
High level nuclear waste	0.0040 lbs.
Low level nuclear waste	0.0001 cubic feet

†2% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.
